

Titanium Exhaust Wrap

Parts included:

1- 35' Roll of Titanium Exhaust Wrap

General Information:

1. This is enough for eleven feet of pipe.
2. This is different than ordinary pipe wrap and is very flexible. This wrap does not need to be wetted prior to wrapping your pipes. It also does not need to be coated like other wraps.
3. For maximum thermal performance it should have an overlap of 1/4".
4. Any variety of clamps may be used at the beginning of the wrap to hold it in place.

Technical Notes:

Wrapping your pipes will increase your performance, while reducing radiant heat by up to 50%.

Keeping exhaust gases hotter within the pipes increases exhaust scavenging, which reduces intake temperatures, resulting in increased horsepower and torque.
