

4 STAGE EBS CATCH CAN INSTRUCTIONS

(Please read entire sheet before beginning install)

Parts included:

- 1- Complete 4 Stage Catch Can
- 1- Extra O-Ring

This Catch Can is meant to be used in place of a filter on an External Breather System.

General Notes:

- If you take a lot of small rides and not a lot of long rides you will want to apply some oil to the internals of the catch can to keep them from rusting.
- When choosing a location for the Catch Can, it is best to place it with the vents pointed up.
- Install onto hose with either a hose clamp or a zip tie
- The Catch Can is easily emptied by holding the top with your fingers (or a wrench) and unscrewing the bottom (can) from the top. Inside you will see:

2 pieces of Low Density foam at the bottom (sometimes it is one thicker piece of low density foam)

3 pieces of High Density foam on the tube

3 vented separators between the top foam to slow down oil and water migration

- All 5 (or 4) pieces of foam can be cleaned with hot soapy water...either in place, or by removing, then cleaning.
- There is a Filter Refresh Kit available at this link-

- If you have the Machine Cut aluminum finish, as little as 10 minutes with some chrome polish or other slightly abrasive metal cleaner will produce a mirror finish.
- **CAUTION:** If you have a Machine Cut Aluminum Finish the fins are very sharp & will cut if you are not careful.

Caution: For Racing Vehicle Use Only. This product is not for use on roads or vehicles subject to emission control requirements and is not legal for use or installation on motor vehicles operated on public highways in the State of California or other States where similar emission and decibel regulation laws may apply. The user shall determine suitability of this product for his or her use. The user shall assume all risk and liability of regulations and any incurred financial obligations due to vehicle inspections or emissions tests.
